### Course Description:

This is an introductory course in Macroeconomics, which is the study of the economy as a whole. We will start with some general principles of economics and then move on to topics specific to the study of Macroeconomics. These topics will include the measurement of economic activity, and both the long-term and short-term equilibrium of the economy. We will examine macroeconomic issues including economic growth and stagnation, unemployment and inflation. As well, we consider policy responses to these issues. (Please note: Some topics may be added or deleted depending on time constraints.)

### Course Objectives/Learning Outcomes:

The main objective of this course is to provide students with a broad overview of the fascinating field of Macroeconomics. After completing this course, students will be familiar with the basic concepts of Macroeconomics. They will understand the idea of equilibrium, and how the distinction between the short run and long run helps us better understand the working of the macro economy. They will also know how macroeconomic policies affect the economy.
